

## Jacobs' Team Experience – SURVICE Engineering

---

### SURVICE Engineering Company Overview

SURVICE Engineering Company is a woman-owned small business (WOSB) that has been producing high-quality analytical products and providing systems engineering and related services since 1981. SURVICE is a single source for a wide range of integrated and specialized engineering and computer science services for the Department of Defense and military system developers/manufacturers. Because of their proven and extensive capabilities, they can expand and supplement their customers' technical expertise to conceive, design, develop, test, evaluate, and field military systems that are safe, survivable, and effective. SURVICE's success is accomplished through the application of engineering, physics, mathematics, computer science, and technical writing resources in the following four integrated areas of competency: Studies & Analysis, Test & Evaluation, Modeling & Simulation, and Information Technologies & Assurance.

SURVICE's specific capabilities include system survivability and safety engineering/analyses and test support, weapon system effectiveness analysis and test support, computer modeling and simulation development and support, and related information technology and information assurance services.
