

AusRAIL 2022

When it comes to planning transport journeys, particularly longer journeys, mobile phones are a vital piece of equipment.

So, what happens when your batteries go flat?

We rely heavily on our phones.

During transit they play a vital role in connecting us to information and keeping us occupied. No phone means we're at the mercy of disinformation and occasionally sheer boredom.

Having detailed transit information just a few taps away is one of the most underrated features of the modern smartphone. Finding the same information offline is difficult.

There's an underlying assumption that you have done your journey planning ahead of time. Train station display screens currently only show information regarding the next few trains departing from the platforms. Things become even more challenging when your journey involves multimodal transport.

What if we could change all that?

Introducing **GoRail** – a concept aimed at helping passengers find multi-modal transit information at the station and plan their onward journey easily.

It also doubles as an infotainment system, and ultimately helping increase the adoption of public transport, improving the sociocultural aspect of a city and promoting a healthy and sustainable lifestyle.

For more insights into how Go Rail can help improve rail journey's, attend:

Go Rail – Making the world smarter, more connected & more sustainable

11:30 – 12:00 pm, Tuesday 6 December
Jacobs AusRAIL Exhibition Theatre

Presented by

Nitika Duggal

Jacobs Project Architect

Tony Jin

Jacobs Architect BIM Specialist

See you there

AusRail 2022

6 - 7 December 2022, Brisbane, Australia
