

## AusRAIL 2022

Innovative technologies such as hydrogen offer an alternative to electrification for some rail clients pursuing a zero-carbon future, particularly those operating in the freight sector in Australia.

**Delivering hydrogen rail project requires a whole-of-system approach;** it's not just about the rail vehicle but also the supporting infrastructure and the changes that will need to be made to service patterns and staff skill sets. As a result, undertaking hydrogen rail projects presents some unique challenges.

By reflecting on projects delivered to date, we can identify a range of lessons learned that can be applied and help underpin the success of future hydrogen rail projects.

For more insights into hydrogen rail projects,  
come along to:

## **Lessons learned from hydrogen rail vehicle projects**

9:00 – 9:30 am, Wednesday 7 December  
In the Jacobs AusRAIL Exhibition Theatre

Presented by

**Paul Fergusson**

Jacobs Strategic  
Rolling Stock  
Consultant

**Maria Alvarez-  
Bayona**

Jacobs Project  
Manager/ Transport  
Specialist

**Ian Sutherland**

Jacobs Senior Project  
Manager – Energy  
Transition

# See you there

**AusRail 2022**

6 - 7 December 2022, Brisbane, Australia
